

# Honda Introduces The Automatic Street Car.

First it was The Street Car. The innovative Honda 600 Sedan. The everyday car that's practical, economical and attractive, all at the same time.

And now Honda introduces the Automatic Street Car, an equally innovative idea resulting in a new transmission which can be operated as a fully automatic unit or which can be shifted manually. We call it "Hondamatic."

You'll find Hondamatic convenient to use. Shifting is always positive, and the selector lever is within easy reach. Hondamatic has a parking gear, too, for extra safety. And the shift quadrant is mounted on the steering column, making it easier to use while maximizing floor space.

Although it's fully automatic in Drive, Hondamatic's design minimizes any power loss. You'll find that acceleration is generous, and overall performance ample.

If manual shifting is more your style, Hondamatic has that too. A beautifully behaved three-speed that allows you to select any gear, and stay in it as long as you like. The kind of flexibility that keeps you in absolute command. You shift it, or we do it for you.

The Honda 600 Sedan with Hondamatic transmission. A big plus for just a little extra.
